

## INTEROFFICE CORRESPONDENCE

DATE August 16, 1990  
 TO All 664 Operations Personnel and Support Groups  
 FROM C. E. Trump, Operational Manager, Waste Assay & Shipping Bldg. 664  
 SUBJECT OSHA REQUIREMENTS FOR BUILDING 664

Presently, there is no EG&G policy or standard for implementing 29CFR1910.120 OSHA HAZMAT training requirements for workers, contractors, and visitors to site-specific areas at the Rocky Flats Plant other than interpretations of OSHA regulations. Occupational Safety has been designated as the group to define and establish plant policy for OSHA regulations for site-specific areas and is currently drafting policies upon which all departments can base their training and work assignments.

All personnel who do not have a minimum of 24 hours OSHA training must be escorted in the waste processing areas at all times with a certified 40-hour OSHA trained person. Only personnel meeting the 40-hour minimum requirement will be allowed to ship, receive or perform support activities that require handling hazardous waste materials stored within the facility. In the case of a hazardous waste spill, all non-40 hour personnel will immediately evacuate the building.

Personnel who do not meet these requirements may use the breakroom facilities, monitoring office, outside docks, yard area and picnic tables without escorts. Restroom facilities will be available to personnel at all times, however, use of the co-ed restroom will require escorting to the door of the restroom and escorting back to the designated areas for those who do not meet the 40-hour requirements.

This interpretation of OSHA Hazardous Waste training requirements will be in effect until a plant policy or guidelines has been established.
